E-Survey of Road users' Attitudes

Project

www.esranet.eu/

Duration

3 years (2018 – 2020)

Objectives

- Collecting data on road users' **opinions, attitudes and behaviour** with respect to road traffic risks
- **Compare the results** of all participating countries
- Provide **scientific support** to road safety policy making at the national and international levels
- **Repeat** this survey on a triennial basis

Methodology

1. An extensive **online panel survey**
2. A **representative sample** (at least N=1,000) of the national adult populations in each participating country
3. The developed **common questionnaire** (UK English) is translated into national language versions
4. The questionnaire covers four main **road safety topics** in different road safety themes: speeding, DUI, distraction/fatigue and protective systems

Impact

- Collection and analysis of **comparable data** on road safety performance
- The ESRA data are used as a basis for a **large set of road safety indicators**
- Scientific evidence for **policy making** at national and international levels

Wave 1 in 2015
 Wave 2 in 2016
 Wave 3 in 2017
