

Monitoring Road Safety Attitudes in Europe

Duration

36 months (Jan. 2018 – Dec. 2020)

Objectives

- Collecting data on road users' opinions, attitudes and behaviour with respect to road traffic risks
- Compare the results of all participating countries
- Provide scientific support to road safety policy making at the national and international levels
- Repeat this survey on a triennial basis

Methodology

1. An extensive online panel survey
2. A representative sample (at least N=1,000) of the national adult populations in each participating country
3. The developed common questionnaire (UK English) is translated into national language versions
4. The questionnaire covers four main road safety topics in different road safety themes: speeding, DUI, distraction/fatigue and protective systems

Impact

Collection and analysis of comparable data on road safety performance

The ESRA data are used as a basis for a large set of road safety indicators

Scientific evidence for policy making at national and international levels

Wave 1 in 2015

Wave 2 in 2016

Wave 3 in 2017
