## CREAM - Freight rail transport of refrigerated cargo on the Benelux - Turkey/ Greece axis

Scientific Responsible
Assistant Professor **Athanasios Ballis** 

The CREAM Project will investigate technical and organizational aspects concerning the transportation of frozen goods between Benelux and Turkey. The activities of this project include the investigation and analysis of the operational prerequisites for the development of logistic services for the transportation of temperature controlled goods as well as for the development of new technologies concerning temperature controlled wagons. In addition a pilot demonstration of this system will be performed by wagons of railway operators participating in the consortium of the project, while in parallel the creation of a branch to Thessaloniki and Athens (Thriasio Pedio) will be investigated.
