Methodological approaches to the restoration of asphalt pavements in the context of heavy maintenance on Attiki Odos

Scientific Responsible
Professor **Andreas Loizos**

The object of this project is to investigate the possibilities of applying methodologies for the optimization of the restoration operation of the non-slip carpet of Attiki Odos, in order to maintain the functionality and the load-bearing capacity of the entire road surface of the road. For this purpose, issues related to the effect of the new anti-slip layer on the structural condition of the existing road surface and which are related to the thickness and type of asphalt of the new asphalt mixture will be examined.
