

Update of the emergency management plan for Lines 2 and 3 of the network of the company STASY (Urban Rail Transport) SA

Scientific Responsible
Assistant Professor **Konstantinos Gkiotsalitis**

In the context of the project entitled "Update of the Emergency Management Plan for Lines 2 and 3 of the network of the company STA.SY (Urban Rail Transport) S.A." the research team of the Railways and Transport Laboratory will support STA.SY in the realisation of the update of the existing emergency management plan of the above lines of the STA.SY. network. To achieve this, a description of the existing situation and the identification of possible emergency needs/crises that may arise will be conducted, including a relevant classification/prioritization. This will be followed by an analysis of processes/activities, identification of best practices and critical factors for the successful implementation of the plan. Based on the above, the final plan will be proposed, and a possible revision will be made if necessary. Finally, STA.SY personnel will be trained by members of the research team in order to be familiarised with the Emergency Management Plan content so that they will be able to cope and effectively manage potential emergencies and crises.
