CAREPLUS 2 – Elaboration of transformation rules converting national road accident values into European

Scientific Responsible Professor **John Golias**

In the framework of the development of the European road accident data base with disaggregate data, CARE, the CAREPLUS 2 project aims to produce methods for the support of reliable and useful analysis of road accident data contained inside CARE. This project will face a series of incompatibilities and will propose valid solutions. CAREPLUS 2 project will produce three types of results: a full glossary of national values and variables used, transformation rules for the comparable national values and the common contents for the European data base.
